

ArcLight Rapid Assessment™

Make sure all systems are go!

Is your company using its Oracle applications to the fullest extent? Or is your business exposed to risk that could be avoided by a quick check, proper planning and training?

An ArcLight Rapid Assessment™ is much like an annual physical from a doctor. Your good sense would embrace the information you get from the check-up. When you have a bill of good health, you can take a sigh of relief. On the other hand, if the doctor finds something wrong with your health, then you can take corrective action immediately to reduce any future risks.

By scheduling a 2-hour open forum discussion with a Solution Architect, we can cover all or any of these topics:

- **System Architecture**
- **Current Pain Points**
- **Oracle Upgrades**
- **Team Knowledge**
- **System Support Structure**
- **Reporting usage**
- **Interface performance**
- **Data quality**

And provide tangible outcomes like:

- **Validation of system usage**
- **Functionality Roadmap**
- **Training suggestions**
